

It's not always easy for pets to tell us when they've had a hard day.

Instead, pets often show us through their behavior, as displayed on the stress escalation ladder below.

## Stress Escalation Ladder

You can help de-escalate stressful situations — and prevent pets from climbing the ladder — with Zylkene®.

If your pet is still experiencing stress, your veterinarian may recommend additional measures and/or visiting a board-certified veterinary behaviorist.

## Zylkene®

Strength	Body Weight	Directions for Use
<b>Zylkene 75 mg</b> Small dogs and cats	Cats and dogs 10 lbs and under	1 capsule daily
	Cats and dogs 11-22 lbs	2 capsules daily

## Zylkene®

Let your care become their calm.

Loud noises

Moving

## Be aware of potential challenges

Zylkene® supports pets through unusual circumstances and **short- and long-term** changes to their environment!

### Short-term situations

The classic Zylkene formulation promotes calm behavior during **short-term situations**, such as:

Loud noises

Travel

Vet visits

Visitors

Kennels

Car rides

### Long-term situations

Zylkene Plus supports relaxation during **long-term situations**, such as:

New baby

New pet

Moving

Home alone

For each cat in your home, provide sufficient resources for each animal, including:

- Litter trays in locations your pet prefers
- Food bowls in different places around the house
- Water bowls, which cats often prefer in a different place than food bowls
- Sleep areas, including higher locations
- Scratching posts that are taller than the cat
- Toys to mimic natural hunting behaviors

## Provide resources to help pets cope

For dogs, create a “den” or a safe place to hide when changes make them uneasy. The den should be:

- Large enough your pet can easily stand up, lie down, or stretch out
- In a space associated with comfort and safety
- Lined with blankets, towels, or old clothes to smell familiar
- Play calming music, TV shows, or use a white noise machine during loud noises, fireworks, or storms
- Include a few treats and toys
- Allow free access to the den at all times

## Why should I use Zylkene products?

1. Backed by real-world evidence<sup>1,2,3,4</sup>
2. Non-sedating. Calms, without affecting personality
3. Ideal for short-term and long-term use
4. Can be given with medications
5. Easy to give and highly palatable<sup>5</sup>
6. Uses high-quality ingredients
7. Lactose free

## Which Zylkene product is right for my pet?

- ▶ Formulated with alpha-casozepine, a natural ingredient derived from bovine hydrolyzed milk protein that has clinically proven calming properties

- ▶ Promotes calm during **short-term** situations

- ▶ Use Zylkene 1-2 days before the event. Some pets may need earlier administration (5-7 days).

- ▶ In a study, Zylkene helped cats deal with the stress of transportation as early as 2 days after the start of administration.<sup>6</sup>

- ▶ Includes alpha-casozepine + white fish muscle hydrolysate, which is naturally rich in bioactive marine peptides and supports adaptation, resilience, and cognitive function

- ▶ Promotes relaxation over **longer periods** (at least 30 days)

- ▶ Use Zylkene Plus 1-2 days before the anticipated period or change in routine. Some pets may need earlier administration (5-7 days).

- ▶ Zylkene Plus improved signs of emotional discomfort at being left home alone in dogs by 32% at day 7.<sup>7</sup>

**Zylkene is easy to administer! Capsules can be administered once daily, whole, or opened. Can be given during or after mealtime.**

For best results, use Zylkene alongside behavior modification and environmental management programs developed in consultation with your veterinarian or a board-certified veterinary behaviorist.
